

Phase 2 – Data Visualization Using Power BI

1. Importing and Preparing Data

- Imported all **Fact and Dimension tables** created during Phase 1 into Power BI.
- Loaded the tables into **Power Query** for further preparation.
- Checked and corrected the **data types** of date, numerical, categorical, and key columns.
- Verified the imported data before creating the report.

2. Data Model Creation

- Created a structured **data model** using the Fact and Dimension tables.
- Established relationships between Fact_Sales and the corresponding dimension tables using the created keys.
- Created relationships with:
 - Dim_Product
 - Dim_Date
 - Dim_Region
 - Dim_SalesChannel
 - Dim_Gender

3. Creation of Calculated Measures

Created required **DAX measures** for the analysis, including measures for:

- Total Revenue
- Total Profit
- Total Units Sold
- Total Orders
- Profit Margin

These measures were used across different visuals to provide dynamic results.

4. Interactive Slicers

Added slicers to make the report interactive and allow users to filter the analysis based on different dimensions, including:

- Year

- Month
- Product Line
- Region
- Gender
- Sales Channel

5. Data Visualizations

Created multiple visualizations to present the sales analysis effectively, including:

- **Bar Charts** for category, product, and regional comparisons
- **Column Charts** for sales and channel comparisons
- **Donut Charts** for category distribution
- **Line Charts** for monthly and time-based sales trends
- **Cards/KPI visuals** for displaying key performance measures

6. Report Page Navigation

- Created multiple report pages for different areas of analysis.
- Added **page navigation** so users can easily move between the different report sections.

7. Bookmarks

- Created multiple **bookmarks** to provide different report views.
- Used bookmarks to switch between different analytical perspectives such as sales and profit views.

8. Buttons

- Added interactive **buttons** for report navigation.
- Created buttons for moving between pages and improving the overall user experience.
- Added a reset/filter button where required to make the report easier to use.

9. Final Report Design

- Organized the visuals into a clear and interactive dashboard layout.
- Added appropriate **titles, labels, legends, and formatting** to make the report easy to understand.

- Ensured that slicers, buttons, bookmarks, and page navigation work together to provide an interactive reporting experience.
